

Join Command Alkon and Hyland Software OnBase experts for this all-day hands-on session designed for existing OnBase users and administrators. A mid-level working knowledge of OnBase will be required to get the most value from this more advanced class.

Advanced Image Processing – Optical Character Recognition (OCR) True Game Changer

This session will focus on the exciting technologies available for Advanced Capture of scanned or imported images. These solutions have become highly reliable and affordable to enhance your Enterprise Content Solution.

The technology can lead you removing the manual processes and allow your people to focus on the processes surrounding the documents and less on the initial import.

This full day session will demonstrate the design, setup, configuration and roll-out of the solution of at least two or three different OCR solutions.

We will focus on AP Invoices and Material Receipt Tickets the most but other document types will be discussed.

You will have the opportunity to use the software in a hands-on lab.

We have a scanner in the classroom to be able to scan and use some of your own invoices in the class.

Once registered, you will receive a communication of what you should bring to make the session most valuable.
